

ALEX AVELINO

Senior Frontend Engineer

Tokyo, Japan · alex.avelinocampos@gmail.com · [linkedin.com/in/alexavelinocam](https://www.linkedin.com/in/alexavelinocam) · github.com/alexavelinoca

SUMMARY

Senior Frontend Engineer based in Tokyo with 7 years of experience building and architecting web products across ecommerce, media streaming, and healthtech, including Rakuten and Paramount+. Strong in React, Next.js, and TypeScript, with a track record of taking products from zero to production, leading high-risk refactors, and shipping to tens of millions of users in multicultural teams. Works AI-native, building custom Claude Code workflows with MCP servers, agents, hooks, and skills to ship faster while keeping code quality high.

SKILLS

- **AI-Assisted Engineering:** Claude Code, MCP servers, agents, hooks, skills; agentic workflows for documentation retrieval, refactoring, and test generation.
- **Frontend:** React, React Native, Next.js (App Router, Server Components, SSR, SSG, ISR), TypeScript, JavaScript, HTML, CSS.
- **UI, Design Systems and Accessibility:** Tailwind CSS, ShadCN UI, MUI, React Hook Form, Zod, Framer Motion, Reanimated, Storybook, Figma, internationalization (i18n), accessibility (ARIA, WCAG).
- **State, Data and APIs:** Zustand, Redux Toolkit, Context API, React Query, tRPC (Backend for Frontend), WebSockets, REST, PostgreSQL (Prisma), MongoDB (Mongoose), Supabase.
- **Testing, CI/CD and Cloud:** Jest, React Testing Library, Cypress, visual regression testing (VRT), GitHub Actions, Jenkins, Podman, Kubernetes, Terraform, AWS (EC2, ECS, EKS, Lambda, S3, CloudFront), Datadog, Grafana.
- **Architecture and Collaboration:** system design, design systems, performance optimization (lazy loading, code splitting, memoization), Agile/Scrum, Jira, Confluence, Bitbucket.

WORK EXPERIENCE

Senior Frontend Engineer, Rakuten Tokyo, Japan · Jul 2025 - present

Rakuten Fashion · ECFD · Feb 2026 - present

- Consolidated ~10 long-lived branches diverged by thousands of commits into one trunk with zero regressions, aligning developers one-on-one and protecting the merge with unit and visual regression tests (Git, Claude Code).
- Migrated 2 of the platform's 15 pages from PHP to React, owning the Styling page (a shoppable runway-style look) and collaborating on the Item page (React, TypeScript).
- Led internationalization for 5 locales (Japanese, English, Korean, Traditional and Simplified Chinese) across SSR and CSR on key pages and shared components (i18n).
- Improved Jenkins CI reliability by cutting VRT runtime 40% across a 230+ component codebase (removing deprecated code) and resolving a critical cluster incident via production rollback (VRT, Jenkins).
- Ramped up on a large legacy architecture in week 1 and reached fluency in team patterns by month 3, using Claude Code with MCP servers to read docs and PR history (Claude Code).

Rakuten 24 Express · ECSD · Jul 2025 - Feb 2026

- Helped architect a fast-delivery ecommerce web app from scratch to production in 6 months as one of 9 frontend engineers in a 22-person team, also deployable as a Rakuten Ichiba miniapp (React, TypeScript, Claude Code).
- Drove product and UX decisions across 14 components with product managers and designers.
- Owned My Favorites and Item pages and built 30+ reusable components adopted by the team across a 120-component design system (Storybook, Figma).
- Built visual regression testing (VRT) with automated diffs, cutting manual visual QA effort by ~80% (Storybook, Podman).
- Built a Claude Code workflow (MCP servers, hooks, skills, agents) pulling context from Jira, Confluence, and Bitbucket, cutting task ramp-up by ~60% (Claude Code).

Senior Frontend Engineer, intive Germany (Remote) · May 2022 - Jul 2025

Genesis · Healthtech / medical imaging · Oct 2024 - Jul 2025

- Defined the architecture and end-to-end workflow for a medical imaging platform with no documented flow, spanning 7 core modules from processing to reporting (React, TypeScript).
- Salvaged a paid-for admin template, stripping ~70% to a lean base, then built the dashboard where users edited AI-generated medical images (Redux, Material UI).
- Implemented role-based access control across 5 user types to meet HIPAA patient-data requirements (React Hook Form, Zustand, NextAuth).

- Proposed and shipped two features on my own initiative: a radiographic before-and-after comparison view and an interactive client demo (CSS, Figma).

Paramount+ · Media streaming · Feb 2023 - Oct 2024

- Rebuilt 4 core surfaces of Paramount+'s web experience (wishlist, search, series, and movie detail) for 70M+ subscribers across browsers, smart TVs, and PS5, shipping region-specific features behind feature flags (React, Redux, TypeScript).
- Built parental controls, content filtering, and accessibility (ARIA, screen readers) across platforms for regional compliance (ARIA, WCAG).
- Optimized video playback performance, raising the Lighthouse score by 30% (Lighthouse).

AMC · Media streaming · May 2022 - Feb 2023

- Migrated ~50 legacy files from class-based to functional React with hooks, improving maintainability (React, hooks).
- Built UI for a config-driven multi-network architecture (SundanceTV, IFC, BBC America), sharing components with text and layout injected via JSON APIs (REST, JSON).

Founding Engineer, Wargos Technologies Lima, Peru · Mar 2019 - Feb 2023

- Joined at concept stage and built the product from zero over 4 years (React, React Native).
- Built and owned the platform's full cloud infrastructure as code with Terraform, replicating the legacy architecture on AWS (EKS, ECS, Lambda, S3) with PostgreSQL.
- Digitized in-casino operations (coupons, raffles, scheduling, ballots) across web and mobile for 40 casino locations (React Native, MUI).
- Built a mobile multi-tenant analytics platform tracking betting and KPIs in real time, helping secure 15 new clients (React Native, Reanimated, MongoDB).
- Recruited and onboarded developers to take over daily operations as I transitioned out.

EDUCATION

Pontificia Universidad Católica del Perú, Lima, Peru. Informatics Engineering. 2022.

PROJECTS

- **Lalala (ららら) NPO storefront:** storefront for a non-profit selling goods to fund support for people facing serious life hardship (Next.js, TypeScript, Sanity CMS). <https://studio-gorron.vercel.app>
- **AI journaling app:** personal journaling app where users log notes and ask an AI chat questions about past entries, using a local LLM via Ollama and a hosted LLM API (Next.js, App Router, Ollama).

PUBLICATIONS

A Systematic Review of User-Centered Design (UCD) Framework Applied to the Redesign of Purchase Order Modules. Avelino, A.J.A.; Cueva, R.; Paz, F.A. (2022).

LANGUAGES

Spanish (Native) · English (Fluent, EF SET C2) · Japanese (Beginner, studying for JLPT N4)
